his daughter dying of consumption and without a cent to get food or medicine.

The meeting between father and daughter was a sad and tender one. His once sweet and beautiful daughter was now a prey to the ravages of disease, with almost fleshless bones, sunken cheeks, and hollow eyes, too weak to raise her head or speak. She could only by a smile show some sign of recogni-tion. Mrs. Matthews cried when she saw the daughter restored to her father, and the detective turned his head aside, while his eyes, which had looked on many scenes of misery and horror,

filled up, and tears ran down his cheeks.

Mr. Savage made every arrangement for his daughter's comfort, and he says all that money can do will be done to make her few days on earth as pleasant as possible. As the daughter can not speak, no information concerning her whereabouts for the past ten years can be ascertained. She has only been liv-ing with Mrs. Matthews about two weeks. Miss Savage is worth nearly \$100,000 in her own right. All her property has been cared for by her father during her absence. She is about 27 years old. Mr. Savage says but for his dream his daughter would have died and been buried as a pauper.

The Brain.

This body that we live in is in a sense the universe to us. We get no light save that which comes in through this strange since organized a special staff of detectives of his own, and is now responsible derful lives in a house beautiful, and it is all in all to him. It was meant to be exclusion of theires and other unwelcome his perfect instrument and not his person. Constant obedience to its laws of the race meetings throughout the would make him the true microcosmthe mirror of the universe—nay of its
Creator. In his ignorance he began to
use strong drinks, and honestly called
them "a good creature of God." But the
them "a good creature of God." But the attractive ingredient in all these bever- Washington family, contributes the folchangeless law, that it acts in exact proportion to the quantity imbibed upon of the Washingtons that they have been, as fire acts upon water, lapping it up with a fierce and insatiable thirst. This affinity of alcohol for moisture is like a feverish and consuming passion, and the blistered nose, burnt brain, and parboiled stomach of the drinking man are naturally nevertable object lessons to illustrate the second of the drinking man are naturally never the design of the design o ture's perpetual object lessons to illustrate the fact that alcohol must be the redoubtable enemy of an organization made up as the human being is, of seven in every eight parts of water. But with this fact one other, viz.: That the appetite for alcoholic beverages are the only ones on earth that have no power of selflimitation. One glass says two, and two say three, until as a general rule, from the power of self-perpetuation in this ap-petite, the life of a drinker of alcoholics has but two periods, in the first of which he could leave off if he would, and in the last, he would leave off if he could. But how shall the young and thoughtless avoid this supreme peril of their youth unless they know about it, and how shall they learn without a teacher, and how shall they teach except they be sent? This, then, is the rationale of scientific temperance instruction in the public schools.-Miss Francis E. Willard before Teachers' Convention.

Gold and Silver.

Bay State Monthly.
Gold in its relative value to silver has varied greatly at different periods. In the days of the patriarch Abraham it was one to eight; B. C. 1,000, it was one to twelve; B. C. 500, it was one to thirteen; at the commencement of the Chirstian era, it was one to nine; A. D. 500, it was one to eighteen; in 1,100, it was one to eight; in 1,400 it was one to eleven; in 1,545, it was one to six; in 1,551, it was one to two; in 1,600, it was one to ten; in 1,627, it was one to thirteen; in 1,700, it was one to fifteen and one-half; it held was one to fifteen and one-half; it held the latter ratio, with but slight variation, until 1,872, when it began to rise and in 1,876 it rose to one to twenty; it soon gradually declined, and now it stands one to nineteen and one-half. Gold to the amount of \$1,081,000,000 is

the commencement of the Chiretian era. At the period of the discovery of America it had diminished to \$135,000,000. ence is estimated to be \$8,166,000,000, which, if melted into one mass, could be contained in the basement of the Bunker Hill monument; which is a cube of thirty feet. Of the amount of gold in existence \$6,000,000,000 is estimated to be in coin and bullion, \$1,000,000 in watches, and the remainder in plate, jewelry, and ornaments. Of the amount of gold in existence \$2,374,000,000 is estimated to have been obtained from North America, \$1,339,000,000 from South America, \$1,339,000,000 from South America, \$1,858,000,000 from Asia (including Australia, New Zealand, and Oceanica), \$945,-

000,000 from Europe, and \$1,250,000,000 from Africa. The amount of the precious metals now in existence is estimated to be \$13,670,000,000.

ARE TEN YEAR'S SEARCH & Father Finds His Daughter a Wealthy Young Woman, Speechies, Dying, in a Garret.

The mystery surrounding the disappearance ten years ago of Miss Belle Savage, daughter of Nelson Savage, a wealthy farmer residing near Swanton, Garrett counto, Maryland, has in a measure been cleared up by the discovery of the missing girl in a dying condition and in poverty in a room in the tenement No. 7 Caroline street, Baltimore, Md.

Ten years ago Belle was her father's favorite daughter in a happy home, a beautiful girl, with bright prospects and many admirers. She suddenly disappeared. Her parents were nearly distracted. For weeks it was feared she had been drowned or lost in some of the wilds of the mountains. The detectives of Philadelphia, New York and Baltimore were employed in the search, and many thousands of dolars expended in the endeavor to obtain tidings of her. Clews were followed up but never ended in restoring the daughter. In sadness she was mourned as dead; her aged father never gave up hope of her return.

A few days ago the old gentleman, upon awakening one morning, spoke of the dream he had the night previous in which he had seen his lost child in the garret of a dwelling in Baltimore. She was in abject poverty and on her death-bed The dream deeply affected the father, and on Friday he came to this city and placed the case in the hands of Marshall Gray, of the police force. Detectives were detailed to aid the old gentleman to find his daughter. At last, the discovery was made that a pretty young woman without friends was ill in a garret room at Mrs. Matthews' tenement house, No. 7 Caroline street. Together they went to the above house, and there Mr. Savage found his daughter dying of consumption and without a cent to get food or medicine. The meeting between father and between father and who has been on letter the provent of the dream without a cent to get food or medicine. The meeting between father and the windows of a large public-house, who was busily engaged in smashing in the the other day promptly arrest a virago who was busily engaged in smashing in the windows of a large public-house, hard by Bow street police station. ABLE AND SUCCESSFUL OFFICERS.

Inspector Chamberlain, one of the cleverest theif-takers in London, looks just as a detective should. He is a quiet unassuming man, of medium heigth, with nothing particular about him to attract attention, but he has before now unarmed captured desperate men who have not hesitated to empty a few barrels of a revolver in his direction. Ex Sergt. Ham, who was allowed to leave the police, very unwisely, as I think, on his completion of fifteen years' service, will not be offended at me when I say that he looks like an overfed bucolic, all fresh from the plow's tail. This officer during his period of service in the police was a perfect terror to the hunder fraternity. perfect terror to the burglar fraternity. Again and again he was complimented by the magistrates and ordered rewards by the judges. He knew every nortor-ious cracksman in London, and I believe I am correct in stating that during the fifteen years he served on the police he brought more offenders to justice than any other officer ever known to during a like period of service. Notwithstanding this, when his term of service expired no material inducement was offered to him to remain in the force, consequently in the prime of life he retired with the handsome pension of \$5 a week. He has members of the predatory class at many country.

on that has this lowing interesting information: "It may be said to be a characteristic

the brain and nervous system precisely and still are, devoted to agriculture. A quence but in posession of considerable estates that made them independent, influential and prosperous citizens of the neighborhoods where they lived. They nearly all married young and left families. It may be said, too, in this connection, that as a family they are short lived. I find that the Washingtons have always been fond of the gun, and the most noted horsemen of the sections in which they lived. In their habits they are social a d hospitable to a degree of extravagance. They have all been free, good livers and occasionally some have indulged too freely in spirits, but cases of inebriates among them are exceptions. They are most numerous in Virginia, Teennessee and Kentucky, but a consiererable number of them also reside in Ohio, Minnesota, Pennsylvania, Cali-fornia and Georgia, where they have usually settled on the most productive farm lands. As an other characteristic it may be stated that they are unambi-tious for public positions."

Dr. Tonor adds that not a general in

the Revolution wore a beard, nor is there a picture extant to show that any private did.

A Dead Warrior.

Sierra Advocate. When Cochise, the celebrated Apache when Cornise, the celebrated Apache chief was a young man, he was noted as being a friend of the whites, and did all in his power to prevent hostilities on both sides, and often boasted that he had never shed a drop of whiteman's blood. During some of the Apache wars, in 1863, I think, Cochise induced some six or seven of the most influential of the tries to accompany him to the the tribe to accompany him to the United States headquarters. When they arrived they were taken to a large gradually declined, and now it stands one to nineteen and one-half.

Gold to the amount of \$1,081,000,000 is estimated to have been in existence at the commencement of the Chirstian era.
